

Safe and sound – with Wibe Ladders' flexible new staircase ladder

After an extensive development process, and close contact with trade unions and professional craftsmen, Wibe Ladders is now launching a brand new product in its range of step ladders. With individually adjustable legs, the new 77S model offers a completely new form of stability, in every step. "Wobbly painting on stairs or other uneven surfaces is now a thing of the past," says Robert Agerskog, Product Manager at Wibe Ladders.

Professional painters and decorators face different challenges all the time. A common example of this is painting uneven surfaces – but when the surface they stand on has the same problem things become twice as difficult. This health and safety issue is frequently discussed among the trade unions and together with painters and electricians, Wibe Ladders has now developed a solution that simplifies day-to-day work and makes it safer than ever. The 77S staircase ladder is a brand new product based on the earlier 77P model, known for its safe and reliable design. The main difference is that the length of each leg can now be adjusted individually. This guarantees stability and safe working on uneven surfaces.

The design consists of a solid steel platform, a tool shelf placed at hip height, strong side profiles and deep steps. The high placement of the tool shelf keeps your tools at arm's length at any given moment and together with the side profiles it offers the user great support and balance. The large platform and deep steps ensures that the user always can stand comfortably and the anodised aluminium helps to minimise staining on hands and clothes.

"This is a unique product that will make precarious work much simpler for painters, electricians and other tradesmen who were previously forced to use trestle steps with extendible legs, not ideal for stairs and without fall protection. In addition, when working in larger staircases, it is not uncommon to use complete scaffolding to create a stable platform. That need will now be greatly reduced as well. The 77S offers a neat and safe solution, ideal for smaller jobs," says Robert Agerskog, Product Manager at Wibe Ladders.

This is the 77S staircase ladder from Wibe Ladders:

- 77S is available as either a 3-step or 5-step model.
 - The flexible front legs can be extended 390 mm and the rear 900 mm on the 3-step model and 1,000 mm on the 5-step model.
 - Platform dimensions: 320 mm wide in the front and 430 mm deep
 - 80 mm deep steps.
 - Both the fixed legs and the adjustable are equipped with anti-skid protection.
 - Tool shelf at hip level.
 - Anodised aluminium profiles.
